

TASK 6: Create a Strong Password and Evaluate Its Strenght

objective :

To understand what makes a password strong by creating password with different complexity levels and evaluating them using Password meter.

Tool Used :

1. PasswordMeter
2. Web Browser

Password Evaluation :

Password	Strength
password123	Very Weak
Password123	Very Weak
Password@123	Fair
P@sswOrd!2026	Fair
M0on!River#Sky\$2026	Strong

Build a Strong Password:

- Use at least 12–16 characters.
- Mix uppercase and lowercase letters.
- Include numbers.
- Include symbols.
- Avoid personal information.
- Use unique passwords for every account.
- Enable Multi-Factor Authentication (MFA).
- Use a password manager.

Common Password Attacks :

Brute Force Attack:

An attacker tries every possible password until the correct one is found.

Dictionary Attack:

An attacker tries common words and frequently used passwords from a dictionary list.

Conclusion :

Long passwords with uppercase letters, lowercase letters, numbers, and symbols are much stronger and more resistant to password attacks than short or simple passwords.
